

# InTrust®

## Change Auditing and Policy Compliance for the Secure Enterprise

Understanding user and administrator activity is at the heart of a secure and well-managed infrastructure.. But historically, knowing what users do with the access they have to critical network resources has been a challenge to IT organizations. Heterogeneous storage requirements, reasonable assurance, managing change, knowing when violations occur and meeting the reporting needs of various information sources further complicate your environment.

InTrust from Quest Software is the only solution in the market that addresses all of these concerns in heterogeneous environments.

### With InTrust you can:

**Securely Collect Your Event Data:** InTrust ensures the integrity and security of log files by preventing user tampering and reducing chances of lost log data. InTrust also encrypts and compresses event logs before transmission.

**Keep More Data Online:** InTrust, delivers the most rapid and cost-effective access to event log information. Because InTrust is a repository-based solution, it optimizes long-term archiving of the high volumes of data required for effective auditing and policy compliance. When compared to native log file and other event log solutions that only store data in a database, the InTrust repository provides the highest level of data compression available.

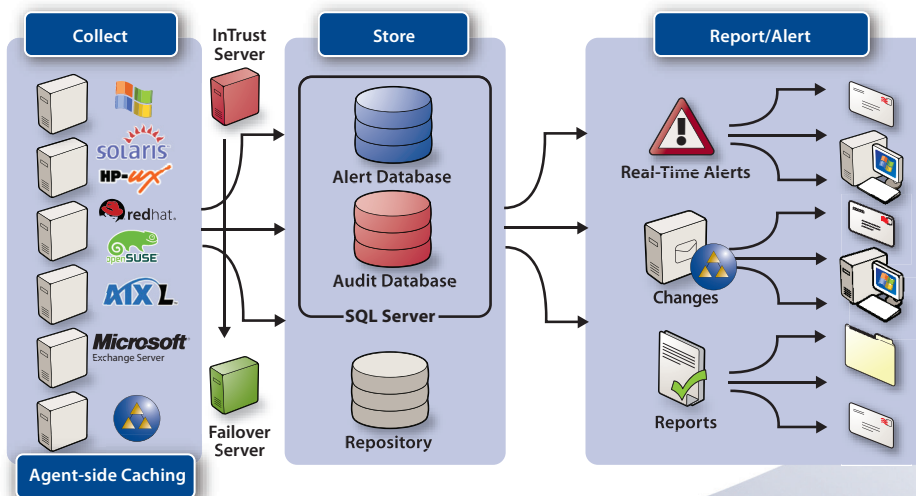

**Report Intelligently:** With InTrust, you can easily create and distribute the information needed for your organization's internal and external auditing efforts. InTrust offers both predefined and custom reports that you can save in a variety of formats. This ensures that you can deliver precisely the information requestors need, how they need it.

**Improve System Security and Performance:** InTrust alerts you in real-time to unusual user, administrator and system activity, such as attempts to access files during non-business hours or multiple failed log-on attempts followed by a successful log-on. InTrust also offers alerts which can be sent directly to you by e-mail or to third-party monitoring applications.

*"InTrust was attractive to us because it provides a single user interface to both policy compliance monitoring and real-time, business-critical security event alerting."*

— Colin Harrison  
Principal Project Manager  
IT Systems Architecture  
Experian, UK, Ltd

- Reduces costs by automating the collection and compression of event data across heterogeneous environments
- Addresses regulatory and policy compliance by compressing and storing critical event data for audits
- Ensures tamper free audit logs via agent-side caching, securing the audit log data from modification or loss
- Improves internal security by identifying user accounts that are being used in violation of corporate policy, proactively alerting in real time
- Provides real-time, detailed tracking and proactive alerting on activity within an Exchange mailbox
- Receive real-time notification and respond to the most critical events and changes to AD and GPOs, taking immediate, automatic action in response to certain events, such as disabling the offending user or reversing the change

**InTrust Features:**

**Key to Compliance:** InTrust addresses regulatory compliance by monitoring access to critical systems and detecting inappropriate or suspicious access-related events. It allows you to collect data on all access-related events across heterogeneous systems, then analyze it, report on it and generate real-time alerts.

**Complete Automation:** With SecureCollect technology, InTrust automates the secure collection of event logs.

**User Activity Tracking:** Through its UserTrack technology, InTrust collects and correlates information on user and administrator activity and other business-critical security and automatically alerts you to any unusual activity.

**Log Integrity:** InTrust enables you to create a cached location on each remote server where logs can be duplicated as they are created. This prevents a rogue user or administrator from tampering with the audit log evidence.

**Redundancy:** InTrust provides automated server redundancy in the case of failure, enabling you to quickly move all configurations and jobs from a crashed server to a backup server to handle all activity.

**Data Compression and Repository Storage:** InTrust offers StoreMore, a unique, two-tiered storage architecture. StoreMore's repository provides unparalleled long-term compression.

**Interactive Repository Search:** InTrust repository searches can provide instant feedback due to the repository indexing feature. Indexing can be enabled and disabled for any repository at any time.

**Real-Time Alerting:** With InTrust's NotifyNow technology, you receive real-time notifications. InTrust can send notifications directly to you via e-mail or to other applications such as Microsoft Systems Center Operations Manager 2005.

**Integration with System Center Operations Manager:** Integration with Microsoft System Center Operations Manager and Audit Collection Services (ACS) provides long-term archival for ACS data, consolidation of multiple ACS agents and databases, preparation of ACS-collected data for report generation and integrated reporting of InTrust events through the Operations Manager Console, streamlining your audit workflow and enabling you to get more from your investment with Microsoft.

**Flexible Reports:** InTrust's FlexReport technology gives you unprecedented access to predefined and customizable reports: HTML, XML, PDF, CSV and TXT, as well as Microsoft Word, Visio and Excel.

**Quick Installation and Deployment:** InTrust features a QuickStart wizard that reduces the time it takes to get results and streamlines the user experience. InTrust's configuration wizard guides you through a complete deployment for your event log management solution.

**About Quest Software, Inc.**

Now more than ever, organizations need to work smart and improve efficiency. Quest Software creates and supports smart systems management products—helping our customers solve everyday IT challenges faster and easier. Visit [www.quest.com](http://www.quest.com) for more information.

5 Polaris Way, Aliso Viejo, CA 92656 | PHONE 800.306.9329 | WEB [www.quest.com](http://www.quest.com) | E-MAIL [sales@quest.com](mailto:sales@quest.com)

**TARGET PLATFORMS**

- Microsoft Windows XP
- Microsoft Windows Vista
- Microsoft Windows 7
- Microsoft Windows NT 4.0 Service Pack 6 or higher
- Microsoft Windows 2000
- Microsoft Windows Server 2003
- Microsoft Windows Server 2003 R2
- Microsoft Windows Server 2008
- Microsoft Windows Server 2008 R2
- Microsoft SQL Server 2008
- Sun Solaris 8.0 (standard installation) with patches
- Sun Solaris 9.0 or 10.0 (standard installation)
- HP-UX 11.11 with patches
- HP-UX 11.23
- IBM AIX 5L version 5.3
- IBM AIX V6 version 6.1
- Red Hat Enterprise Linux AS 3.x or 4.x
- Red Hat Enterprise Linux ES 3.x or 4.x
- SUSE Linux Enterprise Server 9
